

NAGARJUN G

SUMMARY

Python Developer with 3.5+ years of experience, primarily focused on backend development, API development, database-driven applications, and full-stack web development. Experienced in developing and maintaining Python-based applications, implementing business logic and third-party integrations, troubleshooting production issues, and delivering reliable, maintainable software solutions. Strong experience working across the complete development lifecycle, including requirement analysis, development, testing, deployment, debugging, and application maintenance.

EXPERIENCE

OneData Software Solutions, Coimbatore — *Software Developer*

April 2026 - PRESENT

- Develop and maintain backend applications and web-based solutions using Python.
- Design and implement RESTful APIs, business logic, and database-driven features.
- Work on application enhancements, bug fixes, performance improvements, and production issues.
- Collaborate with frontend developers and other team members to deliver end-to-end features.
- Analyze requirements and translate business needs into reliable and maintainable technical solutions.
- Contribute to code reviews, debugging, testing, and continuous improvement of existing applications.

OneData Software Solutions, Coimbatore — *Associate Software Developer*

June 2023 - March 2026

- Developed backend features and REST APIs using Python for multiple web application projects.
- Implemented business logic, database operations, validations, and third-party integrations.
- Worked with frontend components and integrated frontend applications with backend APIs.
- Investigated and resolved application bugs and technical issues across development and production environments.

- Participated in requirement analysis, development, testing, deployment, and maintenance activities.
- Worked on multiple projects with different business requirements and adapted to new technologies and frameworks as needed.
- Collaborated with team members to deliver features within project requirements and timelines.

OneData Software Solutions, Coimbatore — *Python Developer Intern*

April 2023 - June 2023

- Assisted in developing and maintaining Python-based web application features.
- Gained hands-on experience in backend development, API integration, and database operations.
- Worked on debugging, testing, and resolving application issues under the guidance of senior developers.
- Learned and followed development practices including version control, code reviews, and application testing.

TECHNICAL SKILLS

Programming: Python

Backend Development: Django, Django REST Framework, FastAPI, Flask, RESTful APIs

Databases: PostgreSQL, MySQL

Caching & Background Processing: Redis, Celery

Cloud & DevOps: AWS, Docker, Docker Compose

Development: API Integration, Database Design, Microservices, Business Logic Development

Tools & Platforms: Git, Linux/Ubuntu, Swagger/OpenAPI.

EDUCATION

Annamalai University, Cuddalore

Bachelor of Science (B.Sc.) | August 2016 – October 2020

Cuddalore, Tamil Nadu

CAREER HIGHLIGHTS

- 3.5+ years of professional experience in Python development.
- Experience progressing from Python Developer Intern → Associate Software Developer → Software Developer at OneData Software Solutions.

- Hands-on experience in backend development, REST APIs, databases, third-party integrations, and web applications.
- Experience working across development, testing, deployment, debugging, and production support.
- Comfortable collaborating with frontend developers and cross-functional team members to deliver end-to-end features.

PROJECTS

Everity — Blockchain Verification Platform

- Blockchain-based document verification
- 10K+ daily verifications
- WebSocket-based real-time verification updates
- REST APIs
- Authentication, rate limiting, error handling
- React frontend integration

ERPONE — Frappe-based Enterprise System

- Frappe framework
- Inventory, Accounting, HR, CRM
- Database/query optimization
- WhatsApp Business API integration

HyathiHomes — E-commerce Platform

- Production e-commerce platform
- Payment gateway integration
- Order and transaction workflows
- Webhooks/callbacks
- Production deployment and support

Upskilled — Learning Management Integration

- OAuth 2.0 SSO
- Django middleware
- Learner progress synchronization
- AWS Partner Portal reporting automation

Chatbot/RAG — AI-Powered Gateway & Management Platform

- Python, Django, React, REST APIs
- Developed a Portkey and LiteLLM-like application for managing and routing LLM traffic, prompt tracking, and API gateway features
- Built backend services in Django to handle model routing, fallback mechanisms, and usage analytics
- Designed a responsive React frontend interface for managing API keys, monitoring requests, and configuring model endpoints

Upskilled — Learning Platform

- Python, Django, PostgreSQL, Docker, AWS
- Online learning platform using Open edX for educational content delivery and user engagement
- Customized Open edX platform to fit specific client requirements for course delivery and user interaction
- Deployed the platform using Docker and AWS for scalability and performance

Everity — Global SDG Indicator Analysis

- Python, Django, PostgreSQL, Pandas, Machine Learning
- Client project for global SDG (Sustainable Development Goals) indicator analysis, future predictions, and results generation
- Developed a data pipeline for collecting, processing, and analyzing global SDG indicators using machine learning models
- Designed REST APIs for retrieving indicator data and client-specific reports

OneCare — Hospital Management System

- Python, Microservices Architecture, REST APIs
- Developed and maintained billing and reports modules within a microservices-based Hospital Management System (HMS)
- Implemented core business logic for handling secure patient billing transactions and generating detailed reports
- Designed services to communicate efficiently within the microservices architecture

MarketIQ — Analytics & Marketing Reporting Platform

- Python, REST APIs, Third-Party Integrations (Meta, Google, LinkedIn)
- Integrated Meta, Google, and LinkedIn marketing APIs to fetch and aggregate analytics data for reporting purposes
- Developed automated data retrieval workflows to process and analyze campaign metrics across multiple advertising platforms
- Designed backend services to supply consolidated analytics reports and insights

WAFR Tool — AWS Architecture & Well-Architected Framework Assessment

- Python, AWS SDK (Boto3), Open Source Tools
- Developed a tool to retrieve and evaluate AWS account configurations based on the six pillars of the AWS Well-Architected Framework
- Integrated open-source service scanner components to assess cloud resources and generate compliance and architectural reports
- Automated resource inspection to identify security, reliability, and cost-optimization gaps across AWS services

TéKedge — Document Processing & Format Utility

- Python, File Processing, Image Processing
- Developed robust modules for handling image processing and file formatting transformations
- Automated input data sanitization, document conversions, and file structuring workflows
- Integrated validation checks to ensure output accuracy across various document types

Kauvery — Healthcare Data Integration & API Service

- Python, REST APIs, Data Processing
- Developed robust data processing pipelines to ingest and clean healthcare data from external sources
- Integrated third-party APIs to retrieve and synchronize patient records and operational metrics securely
- Automated data validation and transformation workflows to ensure seamless reporting and data integrity
